AMENDMENTS TO THE CLAIMS:

Please amend Claims 34, 36 through 38, 44, and 46 through 48 as follows:

- 1 33. (Cancelled)
- 34. (Currently Amended) An image capture apparatus comprising: an image capture unit that captures images;
- a setting unit adapted to set the number of pixels and a compression ratio individually according to a user request <u>before said image capture unit captures the images</u>; and
- a control unit that controls the number of pixels of each of the <u>captured</u> images according to the number of pixels set by said setting unit, and a compression ratio applied to the <u>captured</u> images according to the compression ratio set by said setting unit.
- 35. (Previously Presented) An apparatus according to claim 34, further comprising:
- a display unit that displays information indicating the number of pixels and the compression ratio individually set by said setting unit.
- 36. (Currently Amended) An apparatus according to claim 34, further comprising:
- a recording unit that records the <u>captured</u> images controlled by the <u>said</u> control unit

- 37. (Currently Amended) An apparatus according to claim 34, further comprising:
- a wireless transmitting unit that transmits the <u>captured</u> images controlled by the said control unit wirelessly.
- 38. (Currently Amended) An apparatus according to claim 34, further comprising:
- a display unit that displays information indicating the number of pixels and the compression ratio individually set by said setting unit;
- a recording unit that records the <u>captured</u> images controlled by the <u>said</u> control unit; and
- a wireless transmitting unit that transmits the <u>captured</u> images controlled by the \underline{said} control unit wirelessly.

39 - 43. (Cancelled)

- 44. (Currently Amended) An image capture apparatus comprising: an image capture unit that captures images;
- a setting unit adapted to set a frame rate, the number of pixels, and a compression ratio individually according to user requests <u>before said image capture unit captures the images</u>; and
- a control unit that controls a frame rate applied to the <u>captured</u> images according to the frame rate set by said setting unit, the number of pixels of each of the <u>captured</u> images according to the number of pixels set by said setting unit, and a compression ratio applied to the <u>captured</u> images according to the compression ratio set by said setting unit.

- 45. (Previously Presented) An apparatus according to claim 44, further comprising:
- a display unit that displays information indicating the frame rate, the number of pixels, and the compression ratio individually set by said setting unit.
- 46. (Currently Amended) An apparatus according to claim 44, further comprising:
- a recording unit that records the <u>captured</u> images controlled by the <u>said</u> control unit.
- 47. (Currently Amended) An apparatus according to claim 44, further comprising:
- a wireless transmitting unit that transmits the $\underline{\text{captured}}$ images controlled by the $\underline{\text{said}}$ control unit wirelessly.
- 48. (Currently Amended) An apparatus according to claim 44, further comprising:
- a display unit that displays information indicating the frame rate, the number of pixels, and the compression ratio individually set by said setting unit;
- a recording unit that records the <u>captured</u> images controlled by the <u>said</u> control unit; and
- a wireless transmitting unit that transmits the $\underline{\text{captured}}$ images controlled by the $\underline{\text{said}}$ control unit wirelessly.
